HAR File

The HTTP Archive format - HAR - is a JSON-formatted archive file format for logging of a web browser's interaction with a site. The common extension for these files is .har.

Typically data about timings is stored and can be used to generate a waterfall graph:

- Time to fetch DNS information
- Time for each object request
- Time to connect to server
- Time to transfer assets from the server to the browser of each object

HAR files can be generated by most browsers.
